

IBM WebSphere Portal V6 Administration 2 (WP720GB)

Course Duration: 2 days

Audience

This course is intended for IBM customers, independent software vendors, systems integrators, and IBM technical staff. Architects and developers responsible for implementing solutions using WebSphere Portal Version 6 will also benefit.

Pre-requisites

- Intermediate administration skills using WebSphere Application Server version 6.0, acquired through experience and/or completion of IBM WebSphere Application Server V6 Administration (WF3860GB)
- Basic knowledge of portals and WebSphere Portal, acquired by completing IBM WebSphere Portal Version 6.0 Fundamentals (WP010)
- Basic knowledge of portal security concepts, acquired by completing IBM WebSphere Portal V6 Administration 1 (WP710)
- WebSphere Application Server v6 Administration (WF3860GB)
- IBM WebSphere Portal V6 Administration 1 (WP710GB)

Objective

- Explain portal topologies
- Describe portal installation scenarios
- Create a portal cluster
- Deploy portlets, skins, and themes to a cluster
- Move portal content from staging to production environments
- Troubleshoot problems in a clustered environment
- Describe production procedures and administration in a clustered environment
- Implement a database configuration split
- Enable multiple LDAP and multiple realm support

Topics to be covered:

- Portal topologies
- Portal installation
- Creating a portal cluster
- Deploying portlets, skins and themes to a cluster
- Moving from staging to production
- Troubleshooting Portal in a clustered environment
- Production procedures and administration
- Multiple LDAP user registries
